

Blinkit Sales Analysis Dashboard **(Power BI)**

Project Overview

This project presents a comprehensive sales analysis of Blinkit, India's last-minute grocery delivery platform. The dashboard was built using **Power BI** to uncover insights about sales performance, item categories, outlet types, and customer ratings.

The objective is to transform raw sales data into interactive visual insights that support business performance understanding and decision-making.

Objectives

- Analyze overall sales performance
 - Understand the distribution of items across categories
 - Compare outlet size and location performance
 - Evaluate customer ratings and product visibility
 - Identify trends that impact total sales
-

Tools & Technologies Used

- **Power BI** – Dashboard creation & visualization
- **Power Query** – Data cleaning and transformation

- **Excel** – Data source
-

Dataset Description

The dataset (`BlinkIT Grocery Data.xlsx`) contains sales information for Blinkit grocery products, including:

- Item Identifier
 - Item Type
 - Item Fat Content
 - Outlet Size
 - Outlet Location
 - Outlet Type
 - Item Visibility
 - Sales
 - Customer Ratings
-

Data Cleaning Steps

Data preprocessing was performed in Power Query:

- Removed duplicate records
 - Handled missing values
 - Standardized categorical values
 - Corrected data types
 - Filtered inconsistent entries
-

Key Performance Indicators (KPIs)

Metric	Value
Total Sales	\$1.20M
Average Sales	\$141
Total Items	8523
Average Rating	3.9

Dashboard Insights

- **Tier 3 outlets** contribute the highest sales compared to Tier 1 and Tier 2.
- **Fruits, snacks, and household products** are among the top-selling categories.
- **Medium-sized outlets** generate the majority of the revenue.
- Most items have a customer rating close to 4, indicating good customer satisfaction.

Project Learnings

Through this project, I gained experience in:

- Data cleaning using Power Query
- Building interactive dashboards in Power BI
- Creating KPI metrics and business insights
- Data storytelling using visual analytics

If you found this project useful, feel free to  the repository.
